# MATRIMONY APPLICATION

## System Requirements Specification

---

## BACKEND-SPRING BOOT RESTFUL APPLICATION

### 1 PROJECT ABSTRACT

The **Matrimony Application** is implemented using Spring Boot with a MySQL database. The application aims to provide a comprehensive platform for managing and registering different types of volunteers for different types of programs.

**Following is the requirement specifications:**

	Matrimony Application	
Modules		
	1	User
	1	Partner Preferences
User Module Functionalities		
	1	Login (to send jwt token)
	2	Register an User
	3	Get an user profile by id
	4	Get all matches
	5	Update an user profile by id
	6	Delete an user profile by id
Partner Preferences Module Functionalities		
	1	Create partner preferences by user id
	2	Get partner preferences by user id
	3	Update partner preferences by user id
	4	Delete preferences by user id

## 2 ASSUMPTIONS, DEPENDENCIES, RISKS / CONSTRAINTS

### 2.1 USER CONSTRAINTS

- When fetching a user in `loadUserByUsername`, if the username does not exist, the method should throw a `UsernameNotFoundException` with "User not found" message.
- When fetching a user profile by ID, if the user ID does not exist, the service method should throw a `ResourceNotFoundException` with "User not found" message.
- When updating a user profile by ID, if the user profile ID does not exist, the service method should throw a `ResourceNotFoundException` with "User not found." message.
- When deleting a user profile by ID, if the user profile ID does not exist, the service method should throw a `ResourceNotFoundException` with "User not found." message.

### 2.2 PARTNER PREFERENCES CONSTRAINTS

- When creating a partner preference by user ID, if the user ID does not exist, the service method should throw a `ResourceNotFoundException` with "User not found." message.
- When fetching a partner preference by user ID, if the user ID does not exist, the service method should throw a `ResourceNotFoundException` with "User not found." message.
- When updating a partner preference by user ID, if the user ID does not exist, the service method should throw a `ResourceNotFoundException` with "User not found." message.
- When deleting a partner preference by ID, if the preference ID does not exist, the service method should throw a `ResourceNotFoundException` with "Partner preference profile not found." message.

### 2.3 COMMON CONSTRAINTS

- For all rest endpoints receiving `@RequestBody`, validation checks must be done and must throw custom exceptions if data is invalid.
- All the business validations must be implemented in dto classes only.
- All the database operations must be implemented on entity object only
- Do not change, add, remove any existing methods in the service layer.
- In Repository interfaces, custom methods can be added as per requirements.

### 3 BUSINESS VALIDATIONS

- Username should not be blank.
- User email should not be blank and must be of type email.
- User password should not be blank.
- User gender should not be blank.

### 4 REST ENDPOINTS

Rest End-points to be exposed in the controller along with method details for the same to be created

#### 4.1 USER CONTROLLER

URL Exposed		Purpose
1. /api/users/login		Login the user and return token
Http Method	POST	
Parameter	AuthRequest { email password }	
Return	String (token)	
2. /api/users/register		Creates a new user
Http Method	POST	
Parameter 1	<b>The user data to be created must be received in the controller using @RequestBody.</b>	
Return	UserDTO	
3. /api/users/profile/{userId}		Fetches the user profile by id
Http Method	GET	
Path variable	Long userId	
Return	UserDTO	
4./api/users/profile		Updates an user by id
Http Method	PUT	
Parameter 1	Long (id)	
	<b>The user data to be</b>	

	<b>updated must be received in the controller using @RequestBody.</b>	
Return	UserDTO	

  

5. /api/users		Delete an user by id
Http Method	DELETE	
Parameter 1	Long (id)	
Return	-	

  

6. /api/users/matches		Find all matches for user by id
Http Method	GET	
Parameter	Long (userId)	
Return	List <UserDTO>	

## 4.2 PARTNERPREFERENCES CONTROLLER

URL Exposed		Purpose
1. /api/preferences		Creates a new partner preferences
Http Method	POST	
Parameter	<b>The partner preference data to be created must be received in the controller using @RequestBody.</b>	
Return	PartnerPreferencesDTO	
2. /api/preferences		Gets a partner preferences by user id
Http Method	GET	
Parameter 1	Long (userId)	
Return	PartnerPreferencesDTO	
3. /api/profiles		Deletes a partner preferences by id
Http Method	DELETE	
Parameter 1	Long (userId)	
Return	-	
4. /api/profiles		
Http Method	PUT	

Parameter 1	Long (userId)  <b>The user profile data to be updated must be received in the controller using @RequestBody.</b>	Updates a partner preferences by user id
Return	PartnerPreferencesDTO	

## 5 TEMPLATE CODE STRUCTURE

### 5.1 PACKAGE: COM.MATRIMONYAPPLICATION

#### Resources

<b>MatrimonyApplication (Class)</b>	This is the Spring Boot starter class of the application.	Already Implemented
-------------------------------------	---	---------------------

### 5.2 PACKAGE: COM.MATRIMONYAPPLICATION.REPOSITORY

#### Resources

Class/Interface	Description	Status
<b>UserRepository (interface)</b>	<ul style="list-style-type: none"> <li>Repository interface exposing CRUD functionality for User Entity.</li> <li>You can go ahead and add any custom methods as per requirements.</li> </ul>	Already Implemented
<b>PartnerPreferencesRepository (interface)</b>	<ul style="list-style-type: none"> <li>Repository interface exposing CRUD functionality for PartnerPreferences Entity.</li> <li>You can go ahead and add any custom methods as per requirements.</li> </ul>	Already Implemented

## 5.3 PACKAGE: COM.MATRIMONYAPPLICATION.SERVICE

### Resources

Class/Interface	Description	Status
<b>PartnerPreferencesService (interface)</b>	<ul style="list-style-type: none"><li>Interface to expose method signatures for partner preferences related functionality.</li><li>Do not modify, add or delete any method.</li></ul>	Already implemented.

## 5.4 PACKAGE: COM.MATRIMONYAPPLICATION.SERVICE.IMPL

Class/Interface	Description	Status
<b>JwtService (class)</b>	<ul style="list-style-type: none"><li>Contains template method implementation to jwt utilities.</li><li>Need to provide implementation for all functionalities.</li><li>Do not modify, add or delete any method signature.</li></ul>	To be implemented.
<b>PartnerPreferencesServiceImpl (class)</b>	<ul style="list-style-type: none"><li>Implements PartnerPreferencesService.</li><li>Contains template method implementation.</li><li>Need to provide implementation for partner preferences related functionalities.</li><li>Do not modify, add or delete any method signature</li></ul>	To be implemented.

<b>UserInfoDetails (class)</b>	<ul style="list-style-type: none"> <li>• Implements UserDetails.</li> <li>• Contains template method implementation.</li> <li>• Need to provide implementation for user info details related functionalities.</li> <li>• Do not modify, add or delete any method signature.</li> </ul>	To be implemented.
<b>UserServiceImpl (class)</b>	<ul style="list-style-type: none"> <li>• Implements UserDetailsService.</li> <li>• Contains template method implementation.</li> <li>• Need to provide implementation for user info service related functionalities.</li> <li>• Do not modify, add or delete any method signature.</li> </ul>	To be implemented.

## 5.5 PACKAGE: COM.MATRIMONYAPPLICATION.CONTROLLER

### Resources

Class/Interface	Description	Status
<b>UserController (Class)</b>	<ul style="list-style-type: none"> <li>• Controller class to expose all rest-endpoints for user related activities.</li> <li>• May also contain local exception handler methods</li> </ul>	To be implemented
<b>PartnerPreferencesController (Class)</b>	<ul style="list-style-type: none"> <li>• Controller class to expose all rest-endpoints for partner preferences related activities.</li> <li>• May also contain local exception handler methods</li> </ul>	To be implemented

## 5.6 PACKAGE: COM.MATRIMONYAPPLICATION.DTO

### Resources

Class/Interface	Description	Status
UserDTO (Class)	<ul style="list-style-type: none"><li>Use appropriate annotations for validating attributes/fields of this class.</li></ul>	Partially implemented.
PartnerPreferencesDTO (Class)	<ul style="list-style-type: none"><li>Use appropriate annotations for validating attributes/fields of this class.</li></ul>	Partially implemented.

## 5.7 PACKAGE: COM.MATRIMONYAPPLICATION.ENTITY

### Resources

Class/Interface	Description	Status
PartnerPreferences (Class)	<ul style="list-style-type: none"><li>This class is partially implemented.</li><li>Annotate this class with proper annotation to declare it as an entity class with <b>id</b> as primary key.</li><li>Map this class with an partnerpreferences <b>table</b>.</li><li>Generate the <b>id</b> using the IDENTITY strategy</li></ul>	Partially implemented.
User (Class)	<ul style="list-style-type: none"><li>This class is partially implemented.</li><li>Annotate this class with proper annotation to declare it as an entity class with <b>id</b> as primary key.</li><li>Map this class with a user <b>table</b>.</li><li>Generate the <b>id</b> using the IDENTITY strategy</li></ul>	Partially implemented.

<b>AuthRequest(Class)</b>	<ul style="list-style-type: none"> <li>• This class is already implemented.</li> <li>• This should be used for taking input for auth requests.</li> </ul>	Already implemented.
---------------------------	---	----------------------

## 5.8 PACKAGE: COM.MATRIMONYAPPLICATION.EXCEPTION

Class/Interface	Description	Status
<b>ResourceNotFoundException (Class)</b>	<ul style="list-style-type: none"> <li>• Custom Exception to be thrown when trying to fetch, update or delete the user profile info which does not exist.</li> <li>• Need to create Exception Handler for same wherever needed (local or global)</li> </ul>	Already implemented.
<b>ErrorResponse (Class)</b>	<ul style="list-style-type: none"> <li>• RestControllerAdvice Class for defining global exception handlers.</li> <li>• Contains Exception Handler for <b>InvalidDataException</b> class.</li> <li>• Use this as a reference for creating exception handler for other custom exception classes</li> </ul>	Already implemented.
<b>RestExceptionHandler (Class)</b>	<ul style="list-style-type: none"> <li>• RestControllerAdvice Class for defining rest exception handlers.</li> <li>• Contains Exception Handler for <b>ResourceNotFoundException</b> class.</li> <li>• Use this as a reference for creating exception handler for other custom exception classes</li> </ul>	Already implemented.

## 5.9 PACKAGE:COM.MATRIMONYAPPLICATION.CONFIG

### Resources

Class/Interface	Description	Status
SecurityConfig (Class)	<ul style="list-style-type: none"><li>Provides a filter that intercepts the request and authenticates the user.</li></ul>	Need to be implemented.

## 5.10 PACKAGE: COM.MATRIMONYAPPLICATION.FILTER

Class/Interface	Description	Status
JwtAuthFilter (Class)	<ul style="list-style-type: none"><li>Responsible for processing incoming requests by inspecting the "Authorization" header to identify and validate a Bearer token.</li></ul>	Partially implemented.

## 6 EXECUTION STEPS TO FOLLOW FOR BACKEND

1. All actions like build, compile, running application, running test cases will be through Command Terminal.
2. To open the command terminal the test takers need to go to the Application menu (Three horizontal lines at left top) -> Terminal -> New Terminal.
3. cd into your backend project folder
4. To build your project use command:
  - i. **mvn clean package -Dmaven.test.skip**
5. To launch your application, move into the target folder (**cd target**). Run the following command to run the application:
  - i. **java -jar <your application jar file name>**
6. This editor Auto Saves the code.
7. If you want to exit(logout) and continue the coding later anytime (using Save & Exit option on Assessment Landing Page) then you need to use **CTRL+Shift+B**-command compulsorily on code IDE. This will push or save the updated contents in the internal

git/repository. Else the code will not be available in the next login.

8. These are time bound assessments the timer would stop if you logout and while logging in back using the same credentials the timer would resume from the same time it was stopped from the previous logout.
9. To test any Restful application, the last option on the left panel of IDE, you can find ThunderClient, which is the lightweight equivalent of POSTMAN.
10. To test any UI based application the second last option on the left panel of IDE, you can find Browser Preview, where you can launch the application.
11. Default credentials for MySQL:

- a. **Username: root**
- b. **Password: pass@word1**

12. To login to mysql instance: Open new terminal and use following command:

- a. **sudo systemctl enable mysql**
- b. **sudo systemctl start mysql**

**NOTE:** After typing the second sql command (sudo systemctl start mysql), you may encounter a warning message like :

System has not been booted with systemd as init system (PID 1). Can't operate.  
Failed to connect to bus: Host is down

>> Please note that this warning is expected and can be disregarded. Proceed to the next step.

- c. **mysql -u root -p**

**The last command will ask for password which is 'pass@word1'**

13. Mandatory: Before final submission run the following command:

**mvn test**

14. You need to use **CTRL+Shift+B** - command compulsorily on code IDE, before final submission as well. This will push or save the updated contents in the internal git/repository, and will be used to evaluate the code quality.
